A BETTER APPROACH

Vioguard is an international leader in affordable, effective infection control. The Vioguard Cubby+ kills even the most tenacious superbugs and HAIs by disrupting them at the molecular level.

To use the Vioguard Cubby+, simply open the tray door and insert your item onto the shelf. Close the door and the Viodguard Cubby+ will automatically run the "Quick Clean" and "Deep Clean" cycles.

PRACTICAL APPLICATIONS

- **Nursing Stations and Operating Rooms:** Disinfect all of the small items used in patient areas such as stethoscopes, phones, tablets, pens and many others!
- **ICU and NICU:** Parents and visitors can disinfect phones and personal items before entering these highly protected areas.
- **Patient Check In:** Continuously disinfect the pens, tablets, and clipboards patients use to check in.
- **Cleaning Stations:** Put a Cubby+ at every cleaning station, and all those problematic items will be disinfected before you finish washing your hands!

HOW OFTEN DO YOU DISINFECT...

...your phone, tablet, keys, glasses, name badge, stethoscope, and pens?

Numerous research studies highlight the dangers of contamination from pathogens on items used by patients and clinitians—these pathogens are then easily transfered to everything you touch. These items have been nearly impossible to effectively disinfect until Vioguard introduced the Cubby+.

The Cubby+ from Vioguard is proven to disinfect even the most resistant viruses, germs, and bacteria in under 45 seconds using germicidal UV light. Vioguard's disinfection systems feature unique patented technology that measures the total UV dosage to guarantee it has reached effective levels before signaling disinfection is complete. Vioguard's unique approach provides complete assurance of effective infection prevention by killing even the most difficult pathogens.

CUBBY+ UV-C KILLS 99.99%

C. diff	Under 45 Seconds
MRSA	Under 10 Seconds
S. aureus	Under 10 Seconds
E. coli	Under 10 Seconds

Ondine Research Laboratories, Inc. Test Report: Microbial Disinfection, Cubby+ Vioguard, Inc.

360-Degree UV-C Disinfection

Independent lab tests of the Cubby+ "Quick Clean" and "Deep Clean" options verify just how fast and effective it is in disinfecting many multiple-use items. Cubby+ effectively eliminates C. diff, one of the toughest pathogens, in 45 seconds. Less robust pathogens like MRSA, S. aureus, E. coli, and others are disinfected in less than 10 seconds.

Recontamination happens quickly, but the Cubby+ is so fast that it's easy to use multiple times per day. The Cubby+ is also a simple, effective, and economical way to disinfect items your patients use to check in or are using while in your facility (e.g. tablets, phones, pens, clipboards, etc.)
